

# AIMMS Project Audit

Improve your AIMMS project through  
an audit by our consultants

---

## Getting the Most out of AIMMS

---

Do you have the feeling that...

- you are not using AIMMS in the most effective way?
- adapting your model could be done using much less effort?
- your application uses too much memory?
- building your GUI takes too much time?
- your GUI could look more professional?

Or do you have concerns about...

- the correctness of your model?
- the computational times involved in running your model?
- running into the memory limitations of your operating system?
- the robustness of your solutions?
- GUI pages that take too long on opening?

If the answer to one or more of the above questions is yes, you can opt for an AIMMS Project Audit. AIMMS has a group of experienced consultants that can help you improve your AIMMS project. Whether you want us to investigate your complete application or just one specific area, past experience has taught us that even the most experienced AIMMS users can benefit from our expert advice.

---

## Audit Process

---

The steps involved in an AIMMS Project Audit are dependent on the size of the AIMMS project and the areas of concern. All the steps below will not always be required, but do provide an indication of the process involved.

- Identification – In the Identification phase we will identify the problem areas in the AIMMS project that can possibly be improved. For these areas we determine the number of hours we expect to spend when analysing these areas and reporting the improvements. With this information the exact scope of the AIMMS Project Audit can be determined.
- Analysis and Report – During this phase we will investigate the problem areas that are selected in the Identification phase in detail. We report the items that can be improved, and give advice on how the improvements can be achieved.
- Implementation – The Analysis and Report phase will result in a list of improvements. You can decide whether you want us to implement these for you, or whether you want to do it yourself with the support of an AIMMS consultant when required. We would recommend the second approach since this then becomes a learning exercise enhancing in-house skills for the future.
